DETAILED ACTION

Specification

1. The abstract which appears on the page of the PCT Gazette of published international application number WO 00/65327 will be used as the abstract for this application.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mitchum, Jr. (U.S. Pat. No. 5,603,413) in view of Wyeth et al. (U.S. Pat. No. 3,778,214).

Regarding claims 1 and 4; Mitchum, Jr. discloses a sortation method for transparent optically active articles which have all the features of the present invention except that the article to be inspected is a container having a plurality of polymer layers; however, such a feature is known in the art, for example as taught by Wyeth et al. Wyeth et al teaches that the container having a plurality of polymer layers is formed on the basis of adding optical absorbing compound (figs. 1 and 10; col. 10 lines 53-66; and col. 12 lines 1-17). Those of ordinary skill in the art at the time the invention was made would have found it obvious to use the inspection device of Mitchum, Jr. for inspecting a transparent article, for example, a container having a plurality of polymer layers as

taught by Wyeth et al. because the inspection device would function in the same manner.

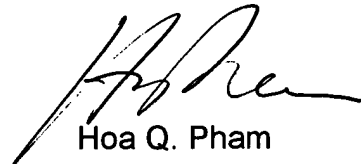

Regarding claims 2-3, see column 9 lines 36-41 for determining the quality of the containers.

Regarding claims 5-6, Mitchum, Jr. teaches that light source could be used in the visible, infrared, or ultraviolet range (col. 4 lines 61-63). Thus, it would have been obvious to use an array of LED emitters.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hoa Q. Pham whose telephone number is (703) 308-4808. The examiner can normally be reached on 6:30 AM to 5 PM, Monday through Thursday.
